Earthquake Analysis Dashboard in Indonesia 2008-2026

The spike in earthquakes in 2025 is only seen in small earthquakes; earthquakes greater than magnitude 4 remain stable at around 1,200–2,800 per year.

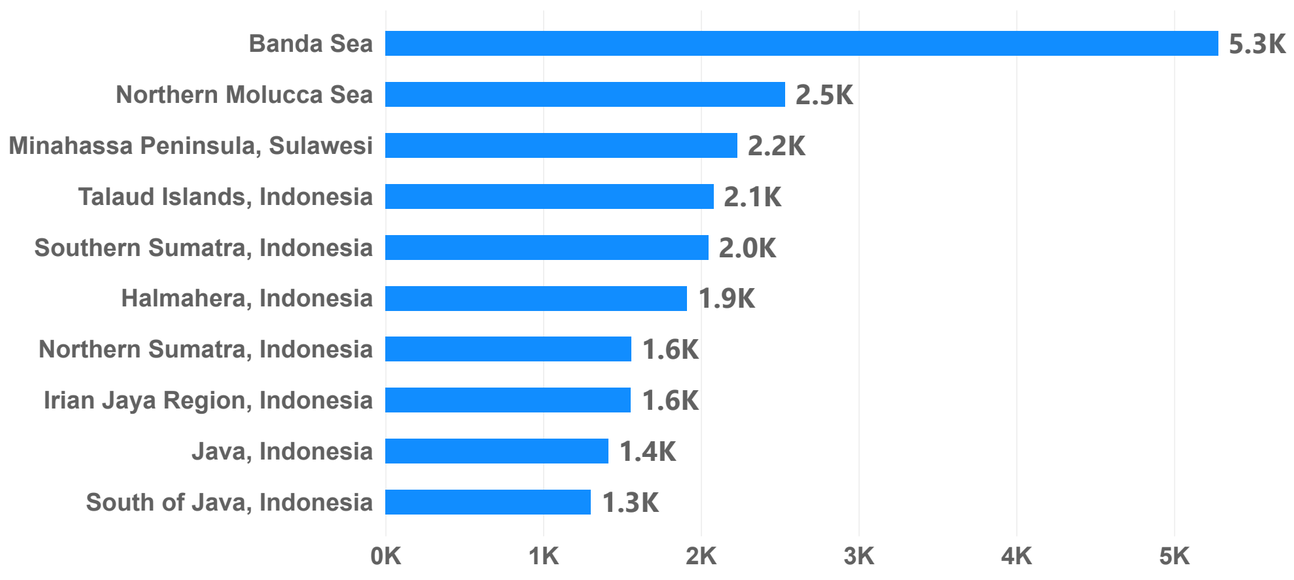

Year

All

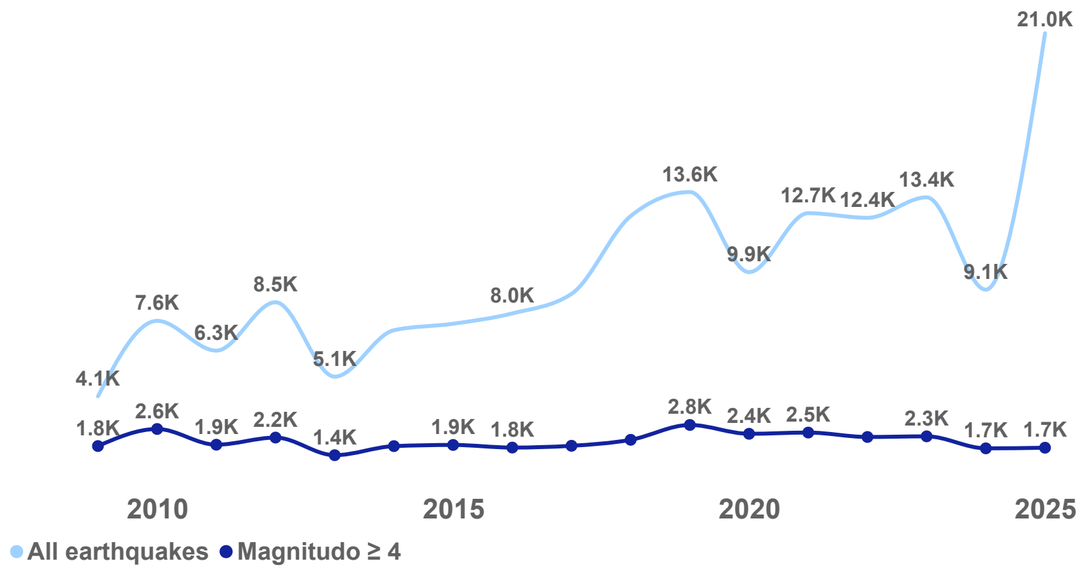

Distribution of earthquakes of magnitude ≥ 6 in Indonesia, 2008-2026

10 regions with the most earthquakes of magnitude ≥ 4

Number of earthquakes per year: all vs magnitude ≥ 4

Note: Raw earthquake counts are misleading due to changing recording coverage (the 2025 spike was dominated by small earthquakes).
Use a magnitude ≥ 4 limit for comparisons between years. BMKG data is preliminary; 2008 and 2026 are not full years.
